Sonix

Onyx

Champagne

Ultra
Shot-Peen

Ultra shot peening the stainless steel surface creates a harder more durable surface, giving the stainless steel its signature matte finish that is scratch and impact resistant.

The mixed material micro-beads are fired into the stainless steel surface causing plastic deformation and hence compressive stress in the material.

Metal Oxide
Coating

Commonly referred to as PVD, Metal Oxide Coating is a vapour deposition technique where solid titanium metal is vaporized in a high vacuum environment and deposited on to the sink surface as a pure metal coating.

The process transfers the titanium at a molecule level providing an extremely hardwearing coloured layer. (*Excludes Sonix)

Soft Resin
Coat

A luxuriously soft nano-resin layer of hydrophobic active substance provides long lasting, ultra-thin protection against food acids and oils.

Similar to a non-stick pan coating, the nano-resin coating ensures easy cleaning and maintenance for your sink.

Shot-Peen Surface
Hardening

Shot peening the stainless steel surface creates a harder more durable surface, that is both scratch-resistant and impact-resistant. The mixed material micro-beads are fired into the stainless steel surface causing plastic deformation and hence compressive stress in the stainless steel material.

Metal Oxide
Coating

Commonly referred to as PVD, Metal Oxide Coating is a vapour deposition technique where solid titanium metal is vaporized in a high vacuum environment and deposited on to the sink surface as a pure metal coating. The process transfers the titanium at a molecule level providing an extremely hardwearing coloured layer.

Nano Resin
Coating

Finally a nano-resin layer of hydrophobic active substance provides long lasting, ultra-thin protection and a durable easy to clean surface effect.
