**PearlArc®**

La collection exclusive PearlArc® de Zomodo, comprenant des éviers, robinets, douches et accessoires, utilise la dernière technologie de traitement de surface par arc cathodique à trois étapes. PearlArc® est un processus exclusif et protégé par marque déposée.

PearlArc® Technology:

### SHOT-PEEN

#### DURCISSEMENT DE SURFACE

Le grenaillage de l'acier inoxydable crée une surface plus dure et plus durable, à la fois résistante aux rayures et aux chocs. Les pastilles de matériaux mélangés sont projetées dans la surface en acier inoxydable à une vitesse élevée, provoquant une déformation plastique et donc une contrainte de compression dans le matériel.

### REVÊTEMENT D'OXYDE DE TITANE

Communément appelé PVD, le revêtement d'oxyde de titane et de chrome est une technique de dépôt en phase vapeur où le titane solide ou le métal chromé est vaporisé dans un environnement sous vide poussé et déposé sur la surface de l'évier sous forme de revêtement de métal pur. Le processus se transfère au niveau moléculaire en fournissant une couche colorée extrêmement résistante.

### REVÊTEMENT EN RÉSINE NANO

Enfin, une couche de nano-résine de substance hydrophobe offre une protection ultra-mince de longue durée et une surface durable et facile à nettoyer.
